## EB10513 - Goat Anti-COPA Antibody

Size: 100µg specific antibody in 200µl

**Target Protein** 

Principal Names: alpha coat protein, coatomer protein complex, subunit alpha,

FLJ26320, HEP-COP, xenin, COPA

Official Symbol: COPA

Accession Number(s): NP\_001091868.1; NP\_004362.2

Human GeneID(s): 1314

Non-Human GeneID(s): 12847 (mouse), 304978 (rat)

Important Comments: This antibody is expected to recognize both reported isoforms

(NP\_001091868.1; NP\_004362.2).

### Immunogen

Peptide with sequence CTRASNLENST, from the internal region of the protein sequence according to NP\_001091868.1; NP\_004362.2.

Please note the peptide is available for sale.

## **Purification and Storage**

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

# **Applications Tested**

Peptide ELISA: antibody detection limit dilution 1:1000.

**Western blot:** Approx 140kDa band observed in Human Prostate lysates (calculated MW of 138kDa according to NP\_001091868.1and NP\_004362.2). Recommended concentration: 0.5-2µg/ml. An additional band of 52kDa was consistently observed, however this band was not blocked by the immunizing peptide and it is therefore a non-specific signal. We call for caution when used for other assays than Western blot.

#### **Species Reactivity**

Tested: Human

Expected from sequence similarity: Human, Mouse, Rat, Cow, Pig

EB10513 (0.5μg/ml) staining of Human Prostate lysate (35μg protein in RIPA buffer) with (B) and without (A) blocking with the immunizing peptide. Primary incubation was 1 hour. Detected by chemiluminescence.
