EB07775 - Goat Anti-MDA5 / Ifih1 (mouse) Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: Ifih1, interferon induced with helicase C domain 1, 9130009C22Rik, Helicard, Hlcl, MDA-5, MDA5, MGC90959, melanoma differentiation associated protein-5

Official Symbol: Ifih1

Accession Number(s): NP_082111.1

Non-Human GeneID(s): 71586 (mouse)

Immunogen

Peptide with sequence C-KQKLRNNDLKKQN, from the internal region of the protein sequence according to NP_082111.1.

Please note the [peptide](#) is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:16000.

Western blot: Preliminary experiments gave an approx 80kDa band in Mouse Brain lysates after 1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 116kDa according to NP_082111.1. The 80kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested:

Expected from sequence similarity: Mouse
