# EB11786 - Goat Anti-TMEM132A Antibody

Size: 100µg specific antibody in 200µl

# **Target Protein**

**Principal Names:** DKFZp547E212, FLJ20539, GBP, glucose-regulated protein, 78kDa, GRP78-binding protein, heat shock 70kDa protein 5 (glucose-regulated protein, 78kDa) binding protein 1, heat shock 70kDa protein 5 binding protein 1, HSPA5-binding protein 1, HSPA5BP1, MGC138669, OTTHUMP00000236901, OTTHUMP00000236902,

TMEM132A, transmembrane protein 132A

Official Symbol: TMEM132A

Accession Number(s): NP\_060340.2; NP\_821174.1

Human GenelD(s): 54972

Important Comments: This antibody is expected to recognize both reported isoforms

(NP\_060340.2; NP\_821174.1)

## **Immunogen**

Peptide with sequence C-TAKLDRFKGSRHH, from the internal region of the protein sequence according to NP\_060340.2; NP\_821174.1.

Please note the peptide is available for sale.

# **Purification and Storage**

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

#### **Applications Tested**

Peptide ELISA: antibody detection limit dilution 1:128000.

Western blot: Preliminary experiments gave an approx 85kDa band in Human Glial Cancer lysates after 0.1μg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 110kDa according to NP\_060340.2 and NP\_821174.1. The 85kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

## **Species Reactivity**

Tested:

Expected from sequence similarity: Human
