

Positive Control Lysates

Since 2000, Everest Biotech has been designing a catalogue containing thousands of goat antibodies against a broad range of human, mouse and rat proteins of biomedical interest. And now we are proud to add our new range of accompanying positive control lysates.

Positive Western blot (WB) control lysates, provide the user with a tissue/cell type known to express a particular target protein of interest, to aid in the interpretation of their WB results. We believe that the new range of WB positive control lysates launched here at Everest Biotech, are the first such lysates to be batch specific, providing the user with extra confidence that their experiment is performing as expected. These lysates have been carefully selected, from our in-house Quality Control WB testing of corresponding antibody batches, and are available in 50ul aliquots (7 Tests). The range has been product coded for ease of selection – EBLXXX-TARGET-Ab BATCH, and the source identity of each lysate is strictly proprietary. Everest Biotech will not support their use with any other antibodies or antibody batches, other than those for which they are intended.
