IHC Results

In paraffin embedded Human Small Intestine shows primarily nuclear staining in a number of cells of the

lamina propria. Recommended concentration, 1-2µg/ml.

ELISA

Detection Limit Antibody detection limit dilution 1:4000.

Western

Preliminary experiments gave an approx 35kDa band in Testis and Brain lysates after $0.3\mu g/ml$ antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 221kDa according to NP_038478. The 35kDa band was successfully blocked by

incubation with the immunizing peptide.
