concentration: 4-6µg/ml.

ELISA

Limit

Detection Antibody detection limit dilution 1:2000.

Western

Preliminary experiments gave an approx 55kDa band in Human Bone Marrow and Ovary lysates after 1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 168kDa according to NP_005261.2. The 55kDa band was successfully blocked by incubation with the immunizing peptide.
