Limit

Approx 100kDa band observed in Human Brain (Cerebellum) lysates (calculated MW of 101kDa according to NP\_775766.2). Recommended concentration: 0.5-2μg/ml. An additional band of unknown identity was also consistently observed at 50kDa. This band was successfully blocked by incubation with the immunizing

peptide. We would appreciate any feedback from people in the field - have any such results been reported with

other antibodies/lysates? Have any further splice variants/modified forms been reported?
