Antibody detection limit dilution 1:128000.

Limit Western

Preliminary experiments gave an approx 30kDa band in Human Brain and Liver lysates at 0.5ug/ml. Please note that currently we cannot find an explanation in the literature for the band we observe given the predicted size of approx. 42kDda according to NP_002887.1. We would appreciate any feedback from people in the field have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms

been reported?
