IHC Results	In paraffin embedded human kidney shows rare staining of nucleoli across the kidney . Recommended concentration, 2.5µg/ml.
ELISA Detection Limit	Antibody detection limit dilution 1:4000.
Western Blot	Not yet tested - our routinely used western blotting protocol does not allow detection of proteins as large as the calculated size of 374kDa according to NP_065965.3. Therefore we cannot recommend an optimal concentration and the product is investigative grade. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?
