Detection

Antibody detection limit dilution 1:32000.

Limit Western

Blot

Approx. 20kDa band observed in human testis and HepG2 lysates at 1ug of primary. Please note that the band we observe is different from the predicted size of approx. 58kDa according to NP_060469. Currently we cannot find an

explanation for this in the literature. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any splice variants/modified forms been reported?

Application

Pep-ELISA
