Western

Blot

Antibody detection limit dilution 1:128000.

Limit

Western Blot: Approx 28kDa band observed in Human Liver lysates (calculated MW of 27.9kDa according to NP 700474). Recommended concentration: 1-3µg/ml. A minor band of unknown identity was also consistently observed at 26kDa. This band was successfully blocked by incubation with the immunising peptide. We would

appreciate any feedback from people in the field - have any results been reported with other

antibodies/lysates? Have any further splice variants/modified forms been reported?
