Western blot: Approx 70kDa and 25kDa bands seen in Mouse Brain lysate. Recommended for use at 1-3µg/ml. This result is in agreement with Ho HY et al. (Proc Natl Acad Sci U S A 2001 Sep 25;98(20):11306-11). The CR16 ORF predicts a 49-kDa protein with an unusually high proline content (32%), which likely contributes to

its aberrant migration at 67 kDa on SDS/PAGE and perhaps its reduced dye binding. The 25 kDa band may

represent a novel isoform.

Application

Pep-ELISA, WB **Type**
