Western Blot	Preliminary experiments gave an approx 70kDa band in lysates of cell line Jurkat after 1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 155kDa according to NP_083774.2. The 70kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported
Application Type	Pep-ELISA
