| Storage Instructions | •Can be stored at room temperature for 3 months. •Store at 4°C for 6 months and at -20°C for long term storage. |

1. Take a package from freezer and spray with 70% ethanol in tissue culture hood and let it dry completely. 2. Handle the coverslips with sterile sharp forceps while using. 3. Store unused coverslips at room temperature in tissue culture hood and use them within a week. (If longer storage is desired, store at 4°C). Removing Coverslip from

Usage Summary

Well after Culture 1. Create a lifting tool by bending a needle 0.5-1 mm from tip. 2. Use one hand with the lifting tool to lift coverslip from its edge and use other hand with forceps to hold and remove coverslip from well. Note: Different cells require different coating substrates. If this type of coating did not produce satisfactory results, try a different coating substrate.

Restrictions

This product is intended for research use only.

Shelf Life

1 year at -20°C
