EB08700 - Goat Anti-ABCA6 Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: ABCA6, ATP-binding cassette, sub-family A (ABC1), member 6, EST155051, FLJ43498, ABC transporter ABCA6, ATP-binding cassette A6, ATP-binding cassette, sub-family A, member 6

Official Symbol: ABCA6

Accession Number(s): NP_525023.2

Human GeneID(s): [23460](#)

Immunogen

Peptide with sequence C-RWKLLPHSDEP, from the C Terminus of the protein sequence according to NP_525023.2.

Please note the [peptide](#) is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:32000.

Western blot: Preliminary experiments gave an approx 50kDa band in Human Brain (Cerebellum, Cerebral Cortex, Frontal Cortex) lysates after 0.5µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 184kDa according to NP_525023.2. The 50kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested:

Expected from sequence similarity: Human
