EB06795 - Goat Anti-Arginase I Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: ARG1, arginase, liver, HGNC:663, A-I, arginase, type I, arginase 1, liver-type arginase, type I arginase

Official Symbol: ARG1

Accession Number(s): NP_000036.2; NP_001231367.1; NP_001355949.1

Human GeneID(s): [383](#)

Non-Human GeneID(s): 11846 (mouse), 29221 (rat)

Important Comments: Please note that ARG1 is not expressed in Human M2 macrophages, but it is in other species (eg rodents).

Immunogen

Peptide with sequence CFGLAREGNHKPID, from the C Terminus of the protein sequence according to NP_000036.2; NP_001231367.1; NP_001355949.1.

Please note the [peptide](#) is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:64000.

Western blot: Approx. 38kDa band observed in lysates of cell line HepG2, and approx. 37kDa in Human and Pig Liver lysates (calculated MW of 34.7kDa according to Human NP_000036.2 and 35.0kDa according to Pig NP_999213.1). Recommended concentration: 0.01-0.3µg/ml. Primary incubation 1 hour at room temperature.

Positive Control: A batch specific positive control lysate is available for this product. Please contact Sales@everestbiotech.com for availability.

IHC: Paraffin embedded Human Liver. Recommended concentration: 3.75µg/ml.

Immunofluorescence: Strong expression of the protein seen in the cytoplasm of HepG2 cells. Recommended concentration: 10µg/ml.

Flow Cytometry: Flow cytometric analysis of HepG2 cells. Recommended concentration: 10ug/ml.

Species Reactivity

Tested: Human, Pig

Expected from sequence similarity: Human, Mouse, Rat, Dog, Pig, Cow

EB06795 (0.3 μ g/ml) staining of HepG2 cell lysate (35 μ g protein in RIPA buffer). Detected by chemiluminescence.

EB06795 (0.01 μ g/ml) staining of Human (A) and (0.03 μ g/ml) Pig (B) Liver lysate (35 μ g protein in RIPA buffer). Detected by chemiluminescence.

EB06795 Immunofluorescence analysis of paraformaldehyde fixed HepG2 cells, permeabilized with 0.15% Triton. Primary incubation 1hr (10ug/ml) followed by Alexa Fluor 488 secondary antibody (2ug/ml), showing cytoplasmic staining. The nuclear stain is DAPI (blue). Negative control: Unimmunized goat IgG (10ug/ml) followed by Alexa Fluor 488 secondary antibody (2ug/ml).

EB06795 (3.75 μ g/ml) staining of paraffin embedded Human Liver. Steamed antigen retrieval with citrate buffer pH 6, AP-staining.

EB06795 Flow cytometric analysis of paraformaldehyde fixed HepG2 cells (blue line), permeabilized with 0.5% Triton. Primary incubation 1hr (10 μ g/ml) followed by Alexa Fluor 488 secondary antibody (1 μ g/ml). IgG control: Unimmunized goat IgG (black line) followed by Alexa Fluor 488 secondary antibody.
