# EB11773 - Goat Anti-Contactin 6 / NB-3 (mouse aa160-172) Antibody

Size: 100µg specific antibody in 200µl

# **Target Protein**

Principal Names: Cntn6, contactin 6, contactin-6, mNB-3, NB-3, neural recognition

molecule NB-3

Official Symbol: Cntn6

Accession Number(s): NP\_059079.2

Human GenelD(s): 27255

Non-Human GenelD(s): 53870 (mouse)

### **Immunogen**

Peptide with sequence C-NDSPLYVQEDKRR, from the internal region of the protein sequence according to NP\_059079.2.

Please note the peptide is available for sale.

## **Purification and Storage**

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

## **Applications Tested**

Peptide ELISA: antibody detection limit dilution 1:128000.

Western blot: Preliminary experiments gave an approx 200kDa band in Mouse fetal Brain lysates after 1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 114kDa according to NP\_059079.2. The 200kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

#### **Species Reactivity**

Tested:

Expected from sequence similarity: Mouse
