# EB06214 - Goat Anti-DAPPER1 / DACT1 Antibody

Size: 100µg specific antibody in 200µl

# **Target Protein**

Principal Names: DACT1, FRODO, HDPR1, DAPPER, THYEX3, DAPPER1, dapper homolog 1, antagonist of beta-catenin (xenopus), heptacellular carcinoma novel gene 3, dapper, antagonist of beta-catenin, homolog 1, apper, antagonist of beta-catenin, homolog 1 (Xenopus laevis), DPR1, FRODO, dapper 1, antagonist of beta-catenin Official Symbol: DACT1 Accession Number(s): NP\_057735.2; NP\_001072988.1 Human GenelD(s): <u>51339</u> Important Comments: This antibody is expected to recognise both reported isoforms.

#### Immunogen

Peptide with sequence KPSPAGTAKELEP-C, from the N Terminus of the protein sequence according to NP\_057735.2; NP\_001072988.1.

Please note the peptide is available for sale.

### **Purification and Storage**

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

## **Applications Tested**

Peptide ELISA: antibody detection limit dilution 1:64000.

**Western blot:** Western Blot: Preliminary experiments gave an approx 28kDa band in human bone marrow lysates after 0.1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 90.2kDa according to NP\_057735.2. The 28kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

#### **Species Reactivity**

Tested: Expected from sequence similarity: Human
