# EB07945 - Goat Anti-GPR3 Antibody

Size: 100µg specific antibody in 200µl

#### **Target Protein**

Principal Names: GPR3, G protein-coupled receptor 3, ACCA, OTTHUMP00000043209,

adenylate cyclase constitutive activator

Official Symbol: GPR3

Accession Number(s): NP\_005272.1

Human GeneID(s): 2827

Non-Human GenelD(s): 14748 (mouse), 266769 (rat)

Important Comments: This antibody is not expected to cross-react with GPR6 and

GPR12.

#### Immunogen

Peptide with sequence C-LQRHLLPASH, from the internal region of the protein sequence according to NP\_005272.1.

Please note the peptide is available for sale.

#### **Purification and Storage**

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin

Aliquot and store at -20°C. Minimize freezing and thawing.

## **Applications Tested**

Peptide ELISA: antibody detection limit dilution 1:32000.

Western blot: Approx 35kDa band observed in Human Brain (Hippocampus and Frontal Cortex) lysates (calculated MW of 35.0kDa according to NP\_005272.1). Recommended concentration: 0.3-1µg/ml. An additional band of unknown identity was also consistently observed at 30kDa. This band was successfully blocked by incubation with the immunising peptide. We would appreciate any feedback from people in the field - have any such results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

### **Species Reactivity**

Tested: Human

Expected from sequence similarity: Human, Mouse, Rat, Dog

EB07945 ( $0.3\mu g/ml$ ) staining of Human Brain (Frontal Cortex) lysate ( $35\mu g$  protein in RIPA buffer). Primary incubation was 1 hour. Detected by chemiluminescence.
