EB07172 - Goat Anti-LRRK2 / PARK8 (internal) Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: LRRK2, leucine-rich repeat kinase 2, PARK8, Roco2, Parkinson disease (autosomal dominant) 8, dardarin

Official Symbol: LRRK2

Accession Number(s): NP_940980.2

Human GeneID(s): [120892](#)

Non-Human GeneID(s): 300160 (rat)

Immunogen

Peptide with sequence C-NRKNTGQTQKQKE, from the internal region of the protein sequence according to NP_940980.2.

Please note the [peptide](#) is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:32000.

Western blot: Western Blot: Preliminary experiments gave an approx 200kDa band in Human Brain (Frontal Cortex) lysates after 1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 286kDa according to NP_940980.2. The 200kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested:

Expected from sequence similarity: Human, Rat, Dog
