EB06776-T - Goat Anti-Parvalbumin Antibody - Trial

Size: 20µg specific antibody in 40µl

Target Protein

Principal Names: parvalbumin, HGNC:9704, PVALB, D22S749, parvalbumin alpha, MGC116759

Official Symbol: PVALB

Accession Number(s): NP_002845.1

Human GeneID(s): [5816](#)

Important Comments: Reported variants represent identical protein: NP_002845.1, NP_001302461.1

Immunogen

Peptide with sequence C-GVDEFSTLVAES, from the C Terminus of the protein sequence according to NP_002845.1.

Please note the [peptide](#) is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:64000.

Western blot: Approx 15kDa band observed in Human Cerebellum lysates and approx 16kDa in Rat Brain lysates (calculated MW of 12.1kDa according to Human NP_002845.1 and 11.9kDa according to Rat NP_071944.1). These molecular weights are observed by other sources and were successfully blocked by incubation with the immunizing peptide. Recommended concentration: 0.01-0.3µg/ml. Primary incubation 1 hour at room temperature.

Flow Cytometry: Flow cytometric analysis of Kelly cells. Recommended concentration: 10ug/ml.

Species Reactivity

Tested: Human, Rat

Expected from sequence similarity: Human, Rat

EB06776 (0.01µg/ml) staining of Human Cerebellum (A) lysate + peptide (B) and (0.3ug/ml) Rat Brain (C) lysate + peptide (D) (35µg protein in RIPA buffer). Detected by chemiluminescence.

EB06776 Flow cytometric analysis of paraformaldehyde fixed Kelly cells (blue line), permeabilized with 0.5% Triton. Primary incubation 1hr (10ug/ml) followed by Alexa Fluor 488 secondary antibody (1ug/ml). IgG control: Unimmunized goat IgG (black line) followed by Alexa Fluor 488 secondary antibody.
