# **Applications Tested**

Peptide ELISA: antibody detection limit dilution 1:32000.

Western blot: Approx 37kDa band observed in Human Adrenal Gland lysates (calculated MW of 30.8kDa according to NP\_006202.1). The observed molecular weight corresponds to earlier findings in literature with different antibodies (Normant and Loh, Endocrinology. 1998 Apr;139(4):2137-45; PMID: 9529003). Recommended concentration: 1-3μg/ml. **IHC:** Frozen section of Human Hypothalamus shows staining of dense enkephalinergic

axon plexus and scattered neuronal cell bodies (higher magnification inset) in the human infundibular nucleus. Recommended concentration: 0.3-1µg/ml.

### **Species Reactivity**

Tested: Human

Expected from sequence similarity: Human

### **Specific Reference**
