EB11599 - Goat Anti-Ubinuclein 1 Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: HIRA-binding protein, OTTHUMP00000159925, OTTHUMP00000159926, ubinuclein 1, ubinuclein-1, ubiquitously expressed nuclear protein, UBN1, VT, VT4

Official Symbol: UBN1

Accession Number(s): NP_058632.2

Human GeneID(s): [29855](#)

Important Comments: Reported variants represent identical protein: NP_058632.2, NP_001072982.1.

Immunogen

Peptide with sequence C-SQLHGKGPAVPRK, from the C Terminus of the protein sequence according to NP_058632.2.

Please note the [peptide](#) is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:128000.

Western blot: Preliminary experiments gave an approx 100kDa band in HeLa lysates after 1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 122kDa according to NP_058632.2. The 100kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested:

Expected from sequence similarity: Human
